The Goal Jun 23 2020 Alex Rogo is a harried plant manager working ever more desperately to try and improve performance. His factory is rapidly heading for disaster. So is his marriage. He has ninety days to save his plant - or it will be closed by corporate HQ, with hundreds of job losses. It takes a chance meeting with a colleague from student days - Jonah - to help him break out of conventional ways of thinking to see what needs to be done. Described by Fortune as a 'guru to industry' and by Businessweek as a 'genius', Eliyahu M. Goldratt was an internationally recognized leader in the development of new business management concepts and systems. This 20th anniversary edition includes a series of detailed case study interviews by David Whitford, Editor at Large, Fortune Small Business, which explore how organizations around the world have been transformed by Eli Goldratt's ideas. The story of Alex's fight to save his plant contains a serious message for all managers in industry and explains the ideas which underline the Theory of Constraints (TOC) developed by Eli Goldratt. Written in a fast-paced thriller style, *The Goal* is the gripping novel which is transforming management thinking throughout the Western world. It is a book to recommend to your friends in industry - even to your bosses - but not to your competitors!

Total Manufacturing Solutions Dec 30 2020 Senior executives, professional management consultants, managers and students of all disciplines will find this book a stimulating guide to manufacturing quality and continuous improvement.

Additive Manufacturing Solutions Apr 14 2022 This book serves as an accelerated learning tool for students of Additive Manufacturing. The author presents key aspects of the subject in the form of questions and answers, so learners in a variety of contexts can find answers quickly to their specific question. Solutions to a variety of current, challenging problems are presented, clarified with examples, illustrations and copious references for more thorough investigation of the specific topic. Offers a unique, accelerated learning tool for students of Additive Manufacturing, presenting the subject in the form of questions and answers; Provides solutions to today's challenging problems in additive manufacturing, using examples, illustrations and references; Includes coverage of various aspects of additive manufacturing, such as materials, design, applications, post-process and digital manufacturing.

[Domestic vs. Offshore Manufacturing](#) Dec 22 2022 In an increasingly globalized world, offshore manufacturing is often favored over domestic manufacturing for its ability to meet greater demands for goods that can be manufactured at lower costs, ultimately saving both companies and consumers money. However, a number of concerns also arise when examining offshoring's impact on a domestic and international scale. Some argue that offshoring results in the exploitation of workers from lower-income countries, while others express concern over the potential loss of domestic jobs that can

result from it. This volume examines the benefits and drawbacks of domestic and offshore manufacturing through numerous points of contention.

Sustainable Manufacturing Aug 18 2022 This edited volume presents the research results of the Collaborative Research Center 1026 "Sustainable manufacturing - shaping global value creation". The book aims at providing a reference guide of sustainable manufacturing for researchers, describing methodologies for development of sustainable manufacturing solutions. The volume is structured in four chapters covering the following topics: sustainable manufacturing technology, sustainable product development, sustainable value creation networks and systematic change towards sustainable manufacturing. The target audience comprises both researchers and practitioners in the field of sustainable manufacturing, but the book may also be beneficial for graduate students.

Brownfields Redevelopment Jun 16 2022 In urban planning, a brownfield is a former industrial or commercial site where environmental contamination hinders development. They exist in almost every community--there is probably one in your neighborhood--and state or federal resources can be used to facilitate assessment, cleanup and reuse. Drawing on a range of local and international experiences, this collection of essays focuses on cases where citizens, nonprofits, developers, cities, and state and federal agencies overcame challenges and mitigated risks to redevelop brownfields using leading-edge practices and simple innovations. The Covid-19 pandemic and mass civil unrest of 2020 underscores the importance of health and social justice considerations in future development initiatives.

Bow Ties in Risk Management Aug 26 2020 AN AUTHORITATIVE GUIDE THAT EXPLAINS THE EFFECTIVENESS AND IMPLEMENTATION OF BOW TIE ANALYSIS, A QUALITATIVE RISK ASSESSMENT AND BARRIER MANAGEMENT METHODOLOGY From a collaborative effort of the Center for Chemical Process Safety (CCPS) and the Energy Institute (EI) comes an invaluable book that puts the focus on a specific qualitative risk management methodology - bow tie barrier analysis. The book contains practical advice for conducting an effective bow tie analysis and offers guidance for creating bow tie diagrams for process safety and risk management. *Bow Ties in Risk Management* clearly shows how bow tie analysis and diagrams fit into an overall process safety and risk management framework. Implementing the methods outlined in this book will improve the quality of bow tie analysis and bow tie diagrams across an organization and the industry. This important guide: Explains the proven concept of bow tie barrier analysis for the preventing and mitigation of incident pathways, especially related to major accidents Shows how to avoid common pitfalls and is filled with real-world examples Explains the practical application of the bow tie method throughout an organization Reveals how to treat human and organizational factors in a sound and practical manner Includes additional material available online Although this book is written primarily for anyone involved with or responsible for managing process safety risks, this book is applicable to anyone using bow tie risk management practices in other safety and environmental or Enterprise Risk Management applications. It is designed for a wide audience, from beginners with little to no background in barrier management, to experienced professionals who may already be familiar with bow ties, their elements, the methodology, and their relation to risk management. The missions of both the CCPS and EI include developing and disseminating knowledge, skills, and good practices to protect people, property and the environment by bringing the best knowledge and practices to industry, academia, governments and the public around the world through collective wisdom, tools, training and expertise. The CCPS has been at the forefront of documenting and sharing important process safety risk assessment methodologies for more than 30 years. The EI's Technical Work Program addresses the depth and breadth of the energy sector, from fuels and fuels distribution to health and safety, sustainability and the environment. The EI program provides cost-effective, value-adding knowledge on key current and future international

issues affecting those in the energy sector.

Smart Digital Manufacturing Oct 16 2019 The world progresses toward Industry 4.0, and manufacturers are challenged to successfully navigate this unique digital journey. To some, digitalization is a golden opportunity; to others, it is a necessary evil. But to optimist and pessimist alike, there is a widespread puzzlement over the practical details of digitalization. To many manufacturers, digital transformation is a vague and confusing concept they nevertheless must grapple with in order to survive the Fourth Industrial Revolution. The proliferation of digital manufacturing technologies adds to the confusion, leaving many manufacturers perplexed and unprepared, with little real insight into how emerging technologies can help them sustain a competitive edge in their markets. This book effectively conveys Siemens's knowledge and experience through a concept called "Smart Digital Manufacturing," a stepwise approach to realizing the promise of the Fourth Industrial Revolution. The Smart Digital Manufacturing roadmap provides guidance and enables low-risk, high-reward adoption of new manufacturing software technologies through a series of tipping-point investment decisions that result in optimized manufacturing performance. The book provides readers with a clear understanding of what digital technology has to offer them, and how and when to invest in these essential components of tomorrow's factories. René Wolf is Senior Vice President of Manufacturing Operations Management Software for Siemens Digital Industries Software, a business unit of the Siemens Digital Factory Division. Raffaello Lepratti is Vice President of Business Development and Marketing for Siemens Digital Industries Software.

New Directions in Manufacturing Nov 16 2019 The processes and techniques of manufacturing have changed substantially over the decades and that evolution continues today. In order to examine the potential impacts of these changes, the Department of Commerce asked the NRC to design a workshop to focus on issues central to the changing nature of manufacturing. The workshop brought together a number of experts to present papers about and to discuss the current state of manufacturing in the United States and the challenges it faces. This report presents the results of that workshop. Key challenges that emerged from the workshop and that are discussed include understanding manufacturing trends; manufacturing globalization; information technology opportunities; maintaining innovation; strengthening small and medium-sized enterprises; workforce education; and rising infrastructure costs.

Guidelines for Legwear, Hosiery and Sock Testing Feb 24 2023 The Guidelines for Legwear, Hosiery, and Sock Testing establishes testing standards for the industry and its lab partners. This document covers a range of legwear, hosiery, and sock testing issues, including product safety, labeling, and physical attributes. The standards were developed in partnership with the Manufacturing Solutions Center.

Latest Material and Technological Developments for Activewear Jan 11 2022 Latest Material and

Technological Developments for Activewear provides comprehensive coverage of academic research and industrial advances in this fast-moving field. As society becomes more health conscious, athleisure and sportswear have arrived as key fashion items in the global apparel market. In this book, designers and material scientists will find information on fibers and textiles, new processes, emerging technologies, and new applications that have helped to deliver this new wave of products. In addition to these technical details, the book covers consumer behavior, along with product design and manufacturing. Provides the detailed technical information needed to choose the correct material for demanding activewear products Identifies and analyzes emerging global trends in the activewear industry Covers the latest best practices that help designers create functional, comfortable and fashionable activewear Meets the requirements and standards of the apparel and fashion industry Explores emerging applications of wearable electronics and smart activewear

Tribology and Fundamentals of Abrasive Machining Processes Jul 25 2020 This new edition draws upon the fundamentals of abrasive machining processes and the science of tribology to understand, predict, and improve abrasive machining processes. Each of the main elements of the abrasive machining system is looked at alongside the tribological factors that control the efficiency and quality of the processes described. The new edition has been updated to include a variety of industrial applications. Grinding and conditioning of grinding tools are dealt with in particular detail, and solutions are proposed for many of the most commonly experienced industrial problems, such as poor accuracy, poor surface quality, rapid tool wear, vibrations, workpiece burn, and high process costs. The entire book has been rewritten and restructured, with ten completely new chapters. Other new features include: Extensive explanations of the main abrasive machining processes such as grinding (including reciprocating and creep-feed grinding, high-speed high-efficiency deep grinding, external and internal cylindrical grinding, and centerless grinding), honing, superfinishing, lapping, polishing, and finishing Discussions of the new classes of abrasives, abrasive tools, and bonding materials New case studies and troubleshooting on the most common grinding practices New coverage on grinding tool conditioning, mechanical dressing, and nonmechanical dressing processes Detailed explanations of the effects of process input parameters (such as cutting parameters, workpiece material and geometry, and abrasive tools) on process characteristics, workpiece quality, tool wear, and process parameters (such as cutting forces and temperature as well as achievable material removal rate) Updated topics regarding process fluids for abrasive machining and fluid delivery

The On-line Electric Vehicle Mar 01 2021 This book details the design and technology of the on-line electric vehicle (OLEV) system and its enabling wireless power-transfer technology, the "shaped magnetic field in resonance" (SMFIR). The text shows how OLEV systems can achieve their three linked important goals: reduction of CO₂ produced by ground transportation; improved energy efficiency of ground transportation; and contribution to the amelioration or prevention of climate change and global warming. SMFIR provides power to the OLEV by wireless transmission from underground cables using an alternating magnetic field and the reader learns how this is done. This cable network will in future be part of any local smart grid for energy supply and use thereby exploiting local and renewable energy generation to further its aims. In addition to the technical details involved with design and realization of a fleet of vehicles combined with extensive subsurface charging infrastructure, practical issues such as those involved with pedestrian safety are considered. Furthermore, the benefits of reductions in harmful emissions without recourse to large banks of batteries are made apparent. Importantly, the use of Professor Suh's axiomatic design paradigm enables such a complicated transportation system to be developed at reasonable cost and delivered on time. The book covers both the detailed design and the relevant systems-engineering knowledge and draws on experience gained in the successful implementation of OLEV systems in four Korean cities. The introduction to axiomatic design and the in-depth discussion of system and

technology development provided by The On-line Electric Vehicle is instructive to graduate students in electrical, mechanical and transportation engineering and will help engineers and designers to master the efficient, timely and to-cost implementation of large-scale networked systems. Managers responsible for the running of large transportation infrastructure projects and concerned with technology management more generally will also find much to interest them in this book.

The Wolf at the Door Mar 13 2022 The acclaimed authors of *Death by a Thousand Cuts* argue that Americans care less about inequality than about their own insecurity. Michael Graetz and Ian Shapiro propose realistic policies and strategies to make lives and communities more secure. This is an age of crisis. That much we can agree on. But a crisis of what? And how do we get out of it? Many on the right call for tax cuts and deregulation. Others on the left rage against the top 1 percent and demand wholesale economic change. Voices on both sides line up against globalization: restrict trade to protect jobs. In *The Wolf at the Door*, two leading political analysts argue that these views are badly mistaken. Michael Graetz and Ian Shapiro focus on what really worries people: not what the rich are making but rather their own insecurity and that of people close to them. Americans are concerned about losing what they have, whether jobs, status, or safe communities. They fear the wolf at the door. The solution is not protectionism or class warfare but a return to the hard work of building coalitions around realistic goals and pursuing them doggedly through the political system. This, Graetz and Shapiro explain, is how earlier reformers achieved meaningful changes, from the abolition of the slave trade to civil rights legislation. The authors make substantial recommendations for increasing jobs, improving wages, protecting families suffering from unemployment, and providing better health insurance and child care, and they guide us through the strategies needed to enact change. These are achievable reforms that would make Americans more secure. *The Wolf at the Door* is one of those rare books that not only diagnose our problems but also show us how we can address them.

The Maya of Morganton May 03 2021 The arrival of several hundred Guatemalan-born workers in a Morganton, North Carolina, poultry plant sets the stage for this dramatic story of human struggle in an age of globalization. When laborers' concerns about safety and fairness spark a strike and, ultimately, a unionizing campaign at Case Farms, the resulting decade-long standoff pits a recalcitrant New South employer against an unlikely coalition of antagonists. Mayan refugees from war-torn Guatemala, Mexican workers, and a diverse group of local allies join forces with the Laborers union. The ensuing clash becomes a testing ground for "new labor" workplace and legal strategies. In the process, the nation's fastest-growing immigrant region encounters a new struggle for social justice. Using scores of interviews, Leon Fink gives voice to a remarkably resilient people. He shows that, paradoxically, what sustains these global travelers are the ties of local community. Whether one is finding a job, going to church, joining a soccer team, or building a union, kin and linguistic connections to the place of one's birth prove crucial in negotiating today's global marketplace. A story set at the intersection of globalization and community, two words not often linked, *The Maya of Morganton* addresses fundamental questions about the changing face of labor in the United States.

Statistical Methods for Testing, Development, and Manufacturing Jan 19 2020 Clearly illustrates how established techniques can be easily understood and used with a sample size that is smaller than normally envisioned. Provides solutions to complex industrial problems by demonstrating how to define the problem and evaluate it statistically with the aim of accelerating product design testing that requires fewer samples and offers more information with less test effort. Along with examples, it contains detailed additional material presented in tabular form for both easy reference and cross-reference.

Wealth Creation Feb 12 2022 A new approach to rural development is emerging. Instead of being about attracting companies that might create jobs over which communities have no control, the emerging paradigm is about connecting the unique underutilized assets of place with market

opportunity to grow assets that are owned and controlled by and for the benefit of low-wealth people and places. But asset development is about more than bricks and mortar or narrowly defined financial assets. There are many kinds of assets that communities require to thrive – such as social capital, natural capital, political capital, and intellectual capital. The emerging new approach to rural development is, then about broadening the definition of "wealth," engaging underutilized assets, and a key third element: harnessing the power of the market – rather than relying solely on philanthropy and government. Wealth Creation provides a conceptual guide with practical examples for policymakers, practitioners of economic and community development, community organizers, environmentalists, funders, investors, and corporations seeking a values-based framework for identifying self-interests across sectors that can lead to opportunities to transform existing systems for the collective good.

Data Center Handbook Feb 18 2020 Provides the fundamentals, technologies, and best practices in designing, constructing and managing mission critical, energy efficient data centers
Organizations in need of high-speed connectivity and nonstop systems operations depend upon data centers for a range of deployment solutions. A data center is a facility used to house computer systems and associated components, such as telecommunications and storage systems. It generally includes multiple power sources, redundant data communications connections, environmental controls (e.g., air conditioning, fire suppression) and security devices. With contributions from an international list of experts, The Data Center Handbook instructs readers to: Prepare strategic plan that includes location plan, site selection, roadmap and capacity planning Design and build "green" data centers, with mission critical and energy-efficient infrastructure Apply best practices to reduce energy consumption and carbon emissions Apply IT technologies such as cloud and virtualization Manage data centers in order to sustain operations with minimum costs Prepare and practice disaster recovery and business continuity plan The book imparts essential knowledge needed to implement data center design and construction, apply IT technologies, and continually improve data center operations.
