**Valentine's Rising** Jan 26 2023 Returning to the Ozark Territories, freedom fighter David Valentine is shocked to find it overrun by vampiric Kurians under the command of the merciless Consul Solon. In a desperate gambit, Valentine leads a courageous group of soldiers on a mission to drive a spike into the gears of the Kurian Order. Valentine stakes life, honor, and the future of his home in a rebellion that sparks the greatest battle of his life.

*Choice of the Cat* Dec 25 2022 The alien Reapers have ruled Earth for forty-five years. David Valentine is a member of the human resistance, who is now being trained as a Cat-an elite stealth warrior. His first mission is to investigate the threat of the Twisted Cross, a mysterious new force under Reaper control.

World Design Science Decade: Phase 1 Document 4 Aug 29 2020 The documents in this series originated with a proposal made by R. Buckminster Fuller to the International Union of Architects (I. U. A.) at their VIIIth Congress in London, England in July, 1961, launching the World Design Science Decade. He proposed then that the architectural schools around the world be encouraged by the I. U. A. to invest the next ten years in a continuing problem of how to make the total world's resources which [in 1961] serve only 40% serve 100% of humanity through competent design despite a continuing decrease of metal resources per capita. In essence, The World Design Science Decade series of documents suggests, in great detail, ways in which world architectural schools, and specifically their students, should initiate, and assume The Design Science Decade. The total series includes many of Fuller's most prescient ideas. A note from the series editor, John McHale: "Though the language of some of the texts may seem difficult at first approach, it should be borne in mind that one of our major problems in thinking today [1965] is the use of language systems which still represent a fixed, structurally compartmentalized world view. The terms available to us for the expression of dynamic, rather than static, concepts are far from satisfactory. Fuller's language is particularly representative of the 'transitional state' (of the western world) between the older, traditional, noun-centered culture to its present day, changing, verb-centered culture'. In his search for an adequately descriptive terminology he tends to employ concepts and usages from many different fields juxtaposed in ways which may be unfamiliar to those more customarily restrained within the vocabularies of particular disciplines." Description by the Buckminster Fuller Institute, courtesy of The Estate of R. Buckminster Fuller

**Winter Duty** Aug 21 2022 Major David Valentine and his fugitive battalion are the remnants of an expeditionary force shattered in its long retreat from disaster in the Appalachians. And Valentine is losing allies fast. Some of the clans in the region have declared themselves in favor of the vampiric Kurians, throwing Kentucky into civil war. But instead of retaking the region, the Kurian overlords have ordered the extermination of every human living there...

*Microwave Radiometry and Remote Sensing of the Earth's Surface and Atmosphere* Nov 12 2021 This book contains a selection of refereed papers presented at the 6 Specialist Meeting on Microwave Radiometry and Remote Sensing of the Environment held in Florence, Italy on March 15-18, 1999. Over the last two decades, passive microwave remote sensing has made considerable progress, and has achieved significant results in the study of the Earth's surface and atmosphere. Many years of observations with ground-based and satellite-borne sensors have made an important contribution to improving our knowledge of many geophysical processes of the Earth's environment and of global changes. The evolution in microwave radiometers aboard satellites has increased steadily over recent years. At the same time, many investigations have been carried out both to improve the algorithms for the retrieval of geophysical parameters and to develop new technologies. The book is divided into four main sections: three of these are devoted to the observation of the Earth's surface and atmosphere, and the fourth, to future missions and new technologies. The first section deals with the study of sea and land surfaces, and reports recent advances in remote sensing of ocean wind, sea ice, soil moisture and vegetation biomass, including electromagnetic modelling and the assimilation of radiometric data in models of land surface processes. The following two sections are devoted to the measurement of atmospheric quantities which are of fundamental importance in climatology and meteorology, and, since they influence radio-wave propagation, they also impact on several other fields, including geodesy, navigational satellite and radioastronomy. The last section presents an overview of new technologies and plans for future missions.

*Appalachian Overthrow* Nov 24 2022 Forced to work as a slave in the Appalachian coal mines, Ahn-Kha rebels against the brutality and working conditions and becomes the leader of the people of Coal Country in an uprising against the Maynes family and their Kurian masters.

The Book of Right Change, Jeong Yeok Mar 16 2022 The Book of Right Change, Jeong Yeok ??, was written by Kim Hang in 1885 who was a great Korean scholar and a master of Confucianism, Buddhism, and Taoism. He saw extraordinary symbols of the coming new world in his vision after eighteen years of hard study and meditation. He is said to complete Confucianism teachings, the I Ching, the oldest Chinese philosophy

book. Chung, the author of *Seeking a New World: A New Philosophy of Confucius and Kim Hang*, wrote commentaries to the *Book of Right Change* in his book. This book will be the first English version of the *Book of Right Change* that was originally published in Korea, and that represents a new philosophy of Asia.

**Way of The Wolf** Sep 10 2021 Louisiana, 2065. A lot has changed in the 43rd year of the Kurian Order. Possessed of an unnatural and legendary hunger, the bloodthirsty Reapers have come to Earth to establish a New Order built on the harvesting of enslaved human souls. They rule the planet. They thrive on the scent of fear. And if it is night, as sure as darkness, they will come. On this pitiless world, the indomitable spirit of mankind still breathes in Lieutenant David Valentine. Brought into the special forces of The Wolves—an elite guerilla force sworn to win back Earth—this is Valentine's first command in the Kurian Zone. Driven by the losses of his past and the hope of a future, Valentine is in it to win. No matter how long it takes. No matter what doom of fate awaits him beyond his wildest nightmares. Fight. Kill. Survive. This is the way of The Wolves. "If The Red Badge of Courage had been written by H.P. Lovecraft."—Paul Witcover, author of *Waking Beauty*

**Remote Sensing Applications in Environmental and Earth System Sciences** May 18 2022 Remote Sensing Applications in Environmental and Earth System Sciences is a contemporary, multi-disciplinary, multi-scaling, updated, and upgraded approach of applied remote sensing in the environment. The book begins with an overview of remote sensing technology, and then explains the types of data that can be used as well as the image processing and analysis methods that can be applied to each type of application through the use of case studies throughout. Includes a wide spectrum of environmental applications and issues Explains methodological image analysis and interpretation procedures for conducting a variety of environmental analyses Discusses the development of early warning systems Covers monitoring of the environment as a whole – atmosphere, land, and water Explores the latest remote sensing systems in environmental applications This book is an excellent resource for anyone who is interested in remote sensing technologies and their use in Earth systems, natural resources, and environmental science.

Power Line Interference; Problems and Solutions May 26 2020 In less than 100 years, the power and telecommunications industries have become highly technological and competent in servicing the growing electrical power and communication needs of a complex, modern society. This tremendous advancement has not been without problems of mutual compatibility, however. In the early days of power and telecommunication transmission, fundamental incompatibilities existed between the two systems since both used the earth as a ground return conductor. As the length of both systems' lines grew and the number of subscribers increased, the inductive interference problems became more severe. Further expansion of both industries was seriously threatened when it became necessary to refer these problems to the courts and commissions for resolution, such as California's General Order 52 issued in 1912. As a consequence, representatives from both industries joined in cooperative efforts to study and resolve the main causes of incompatibility. This joint effort, primarily between the Edison Electric Institute and the Bell System, resulted in over fifty engineering reports during the 1920's and 30's. This cooperation resulted in numerous advances and innovations, with the primary development being paired conductors enclosed in metallic shielded cables for telecommunications transmission. Developments such as drainage reactors, longitudinal chokes, neutralizing transformers and isolation transformers also occurred and were applied to open wire lines to suppress power line interference. The above practices and procedures were usually adequate in solving most electromagnetic and electrostatic induced voltage and current problems. However, in the 1960's and 70's certain design features and trends in the environment occurred that presented new and challenging problems in the area of incompatibility. As a result, the Institute of Electrical and Electronic Engineers (IEEE) formed the Inductive Coordination and Electrical Protection (ICEP) Committee to provide effective execution of the following considerations: 1) Design of systems to minimize inductive interference and susceptibility. 2) Adopt standards and guidelines relating to interference. 3) Establish a continuing dialog between interested parties to provide a medium for exchanging information in the advanced planning stages of new facilities. In the meantime, some manufacturers have responded to the industry's need for equipment similar to that used in the open wire days, but better designed and more economical for cable applications. Information on these devices is provided in the later chapters of this manual.

*Multiscale Processes in the Earth's Magnetosphere: From Interball to Cluster* Aug 09 2021 The past forty years of space research have seen a substantial improvement in our understanding of the Earth's magnetosphere and its coupling with the solar wind and interplanetary magnetic field (IMF). The magnetospheric structure has been mapped and major processes determining this structure have been defined. However, the picture obtained is too often static. We know how the magnetosphere forms via the interaction of the solar wind and IMF with the Earth's magnetic field. We can describe the steady state for various upstream conditions but do not really understand the dynamic processes leading from one state to another. The main difficulty is that the magnetosphere is a complicated system with many time constants ranging from fractions of a second to days and the system rarely attains a steady state. Two decades ago, it became clear that further progress would require multi-point measurements. Since then, two multi-spacecraft missions have been launched — INTERBALL in 1995/96 and CLUSTER II in 2000. The objectives of these missions differed but were complementary: While CLUSTER is adapted to meso-scale processes, INTERBALL observed larger spatial and temporal scales. However, the number of papers taking advantage of both missions simultaneously is rather small.

**Electromagnetic Fields and Life** Nov 19 2019 A broad region of the electromagnetic spectrum long assumed to have no influence on living systems under natural conditions has been critically re-examined over the past decade. This spectral region extends from the superhigh radio frequencies, through decreasing frequencies, to and including essentially static electric and magnetic fields. The author of this monograph, A. S. Presman, has reviewed not only the extensive Russian literature, but also almost equally comprehensively the non-Russian literature, dealing with biological influences of these fields. Treated also is literature shedding some light on possible theoretical foundations for these phenomena. A substantial, rapidly increasing number of studies in many laboratories and countries has now clearly established biological influences which are independent of the theoretically predictable, simple thermal effects. Indeed many of the effects are produced by field strengths very close to those within the natural environment. The author has, even more importantly, set forth a novel, imaginative general hypothesis in which it is postulated that such electromagnetic fields normally serve as conveyors of information from the environment to the organism, within the organism, and among organisms. He postulates that in the course of evolution organisms have come to employ these fields in conjunction with the well-known sensory, nervous, and endocrine systems in effecting coordination and integration.

The Earth's Ionosphere Oct 11 2021 Although interesting in its own right, due to the ever-increasing use of satellites for communication and navigation, weather in the ionosphere is of great concern. Every such system

uses trans-ionospheric propagation of radio waves, waves which must traverse the commonly turbulent ionosphere. Understanding this turbulence and predicting it are one of the major goals of the National Space Weather program. Acquiring such a prediction capability will rest on understanding the very topics of this book, the plasma physics and electrodynamics of the system. Fully updated to reflect advances in the field in the 20 years since the first edition published Explores the buffeting of the ionosphere from above by the sun and from below by the lower atmosphere Unique text appropriate both as a reference and for coursework

**Earth 2 Vol. 5: The Kryptonian** Jul 08 2021 On the parallel world of Earth 2, a young team of heroes rose to become Earth's greatest defenders, filling the void left when Superman, Batman and Wonder Woman sacrificed themselves to save the planet. But now, after five years presumed dead, Superman has returned...as a servant of Darkseid! Only one person on Earth has the power to stop the Man of Steel - the lost son of Krypton, Val-Zod! Witness world-changing war and the birth of a brand new Superman as writer Tom Taylor (INJUSTICE: GODS AMONG US) and artist Nicola Scott (SECRET SIX, TEEN TITANS) bring you EARTH 2 VOL. 5: THE KRYPTONIAN (collecting EARTH 2 #21-26, EARTH 2: FUTURES END #1).

**March In Country** Dec 21 2019 The race is on to claim the area between the Ohio River and Tennessee. What's left of the resistance is hiding out in the tangle of central Kentucky hills-leaving the powerful, well-organized Kurian vampires the opportunity to fill the void. Major David Valentine knows a small group of fierce, freedom-loving allies who would be glad to settle the rich lands. But they're more than three hundred miles away, with hostile aliens and vicious human slavers standing between. But even if by some miracle they make it, the Kurian Order isn't about to easily yield the blood-soaked Kentucky soil...

**Planetary Astrobiology** Sep 29 2020 Are we alone in the universe? How did life arise on our planet? How do we search for life beyond Earth? These profound questions excite and intrigue broad cross sections of science and society. Answering these questions is the province of the emerging, strongly interdisciplinary field of astrobiology. Life is inextricably tied to the formation, chemistry, and evolution of its host world, and multidisciplinary studies of solar system worlds can provide key insights into processes that govern planetary habitability, informing the search for life in our solar system and beyond. Planetary Astrobiology brings together current knowledge across astronomy, biology, geology, physics, chemistry, and related fields, and considers the synergies between studies of solar systems and exoplanets to identify the path needed to advance the exploration of these profound questions. Planetary Astrobiology represents the combined efforts of more than seventy-five international experts consolidated into twenty chapters and provides an accessible, interdisciplinary gateway for new students and seasoned researchers who wish to learn more about this expanding field. Readers are brought to the frontiers of knowledge in astrobiology via results from the exploration of our own solar system and exoplanetary systems. The overarching goal of Planetary Astrobiology is to enhance and broaden the development of an interdisciplinary approach across the astrobiology, planetary science, and exoplanet communities, enabling a new era of comparative planetology that encompasses conditions and processes for the emergence, evolution, and detection of life.

**Godzilla: Rulers of Earth #5** Dec 13 2021 On her first assignment, Lucy and her team witness the destruction caused as two foes collide. Plus, the mysterious alien alliance unleashes a new set of monsters, bent on the annihilation of our world.

**The History of the Theory of Structures** Mar 24 2020 Ten years after the publication of the first English edition of *The History of the Theory of Structures*, Dr. Kurrer now gives us a much enlarged second edition with a new subtitle: *Searching for Equilibrium*. The author invites the reader to take part in a journey through time to explore the equilibrium of structures. That journey starts with the emergence of the statics and strength of materials of Leonardo da Vinci and Galileo, and reaches its first climax with Coulomb's structural theories for beams, earth pressure and arches in the late 18th century. Over the next 100 years, Navier, Culmann, Maxwell, Rankine, Mohr, Castigliano and Müller-Breslau moulded theory of structures into a fundamental engineering science discipline that - in the form of modern structural mechanics - played a key role in creating the design languages of the steel, reinforced concrete, aircraft, automotive and shipbuilding industries in the 20th century. In his portrayal, the author places the emphasis on the formation and development of modern numerical engineering methods such as FEM and describes their integration into the discipline of computational mechanics. Brief insights into customary methods of calculation backed up by historical facts help the reader to understand the history of structural mechanics and earth pressure theory from the point of view of modern engineering practice. This approach also makes a vital contribution to the teaching of engineers. Dr. Kurrer manages to give us a real feel for the different approaches of the players involved through their engineering science profiles and personalities, thus creating awareness for the social context. The 260 brief biographies convey the subjective aspect of theory of structures and structural mechanics from the early years of the modern era to the present day. Civil and structural engineers and architects are well represented, but there are also biographies of mathematicians, physicists, mechanical engineers and aircraft and ship designers. The main works of these protagonists of theory of structures are reviewed and listed at the end of each biography. Besides the acknowledged figures in theory of structures such as Coulomb, Culmann, Maxwell, Mohr, Müller-Breslau, Navier, Rankine, Saint-Venant, Timoshenko and Westergaard, the reader is also introduced to G. Green, A. N. Krylov, G. Li, A. J. S. Pippard, W. Prager, H. A. Schade, A. W. Skempton, C. A. Truesdell, J. A. L. Waddell and H. Wagner. The pioneers of the modern movement in theory of structures, J. H. Argyris, R. W. Clough, T. v. Kármán, M. J. Turner and O. C. Zienkiewicz, are also given extensive biographical treatment. A huge bibliography of about 4,500 works rounds off the book. New content in the second edition deals with earth pressure theory, ultimate load method, an analysis of historical textbooks, steel bridges, lightweight construction, theory of plates and shells, Green's function, computational statics, FEM, computer-assisted graphical analysis and historical engineering science. The number of pages now exceeds 1,200 - an increase of 50% over the first English edition. This book is the first all-embracing historical account of theory of structures from the 16th century to the present day.
