Lemon-Aid New Cars and Trucks 2012 Sep 07 2021 Phil Edmonston, Canada's automotive "Dr. Phil," pulls no punches. He says there's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar and an auto industry offering reduced prices, more cash rebates, low financing rates, bargain leases, and free auto maintenance programs. In this all-new guide he says: Audis are beautiful to behold but hell to own (biodegradable transmissions, "rodent snack" wiring, and mind-boggling depreciation) Many 2011-12 automobiles have "chin-to-chest head restraints, blinding dash reflections, and dash gauges that can't be seen in sunlight, not to mention painful wind-tunnel roar if the rear windows are opened while underway) Ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers) GM's 2012 Volt electric car is a mixture of hype and hypocrisy from the car company that "killed" its own electric car more than a decade ago) You can save \$2,000 by cutting freight fees and "administrative" charges) Diesel annual urea fill-up scams can cost you \$300, including an \$80 "handling" charge for \$25 worth of urea) Lemon-Aid's 2011-12 Endangered Species List: the Chinese Volvo, the Indian Jaguar and Land Rover, the Mercedes-Benz Smart Car, Mitsubishi, and Suzuki

Plug-In Electric Vehicles Sep 19 2022 Plug-in electric vehicles are coming. Major automakers plan to commercialize their first models soon, while Israel and Denmark have ambitious plans to electrify large portions of their vehicle fleets. No technology has greater potential to end the United States' crippling dependence on oil, which leaves the nation vulnerable to price shocks, supply disruptions, environmental degradation, and national security threats including terrorism. What does the future hold for this critical technology, and what should the U.S. government do to promote it? Hybrid vehicles now number more than one million on America's roads, and they are in high demand from consumers. The next major technological step is the plug-in electric vehicle. It combines an internal combustion engine and electric motor, just as hybrids do. But unlike their precursors, PEVs can be recharged from standard electric outlets, meaning the vehicles would no longer be dependent on oil. Widespread growth in the use of PEVs would dramatically reduce oil dependence, cut driving costs and reduce pollution from vehicles. National security would be enhanced, as reduced oil dependence decreases the leverage and resources of petroleum exporters. Brookings fellow David Sandalow heads up an authoritative team of experts including former government officials, private-sector analysts, academic experts, and nongovernmental advocates. Together they explain the current landscape for PEVs: the technology, the economics, and the implications for national security and the environment. They examine how the national interest could be served by federal promotion and investment in PEVs. For example, can tax or procurement policy advance the cause of PEVs? Should the public sector contribute to greater research and development? Should the government insist on PEVs to replenish its huge fleet of official vehicles? Plug-in electric vehicles are coming. But how soon, in what numbers, and to what effect? Federal policies in the years ahead will go a long way toward answering those questions. David Sandalow and his colleagues examine what could be done in that regard, as well as what should be done.

Charging Ahead Jan 11 2022 Mary Barra ' s quest to move GM to a manufacturer of electric cars has captured the attention of automobile aficionados, green-business advocates, and leaders of all types who have to admire Mary ' s toughness in moving forward despite the overwhelming obstacles in her path. A decade ago, no one would have guessed that GM would be the company poised to lead America into the future. At a time when business book readers seem endlessly fascinated by soaring tech giants like Amazon and Netflix, and ill-fated startups like WeWork and Theranos, why is it important to put the spotlight back on 112-year-old GM? Because Charlie Wilson ' s quip from 1952 is still true: What ' s good for GM is still good for America, and

vice versa. America needs to transition to a new era of clean energy and environmentally sustainable transportation. We also need to adapt to a world with far fewer assembly-line jobs, but far more skilled jobs for people who can design, build, and operate robots and other high-tech machines. GM ' s attempt to lead those transitions is as important as it is dramatic. Equally compelling is the story of GM ' s CEO, Mary Barra, who against all odds took the reins at GM in 2014. Since that time, she has attempted to reinvent a century-old company and equip it for the biggest change in transportation since the internal combustion engine replaced the horse. In the process, she has been ripping out GM traditions by the roots—and taking flak from all sides. Her plan is to make GM—the company famed for the gas-burning Corvette, hulking Cadillac Escalade, and carbon-spewing Silverado pickup—purely electric and clean by 2035. She may not be as wealthy as Jeff Bezos, as brash as Elon Musk, or as powerful as Mark Zuckerberg, but Mary Barra is just as important as any of them. And as one of the most powerful female executives in the world, she is overdue for an in-depth look at her forward-thinking vision, her approach to leadership, and her accomplishments against the odds.
