Training to Operate a Simulated Micro-Unmanned Aerial Vehicle With Continuous Or Discrete Manual Control Dec 26 2020 This report investigates the effects of continuous vs. discrete control methods and the number of simultaneous camera views on operator performance during training to manually control a simulated micro-unmanned aerial vehicle (MAV). Seventy-two participants were trained to operate a MAV in a simulated environment, to designated criterion levels. They were then given training missions during which performance was measured. Eight conditions were investigated, formed by crossing three 2-level factors: input device (mouse vs. game controller), input control display (discrete vs. continuous), and number of simultaneous camera views (one vs. two). Superior performance was observed when a continuous input method (e.g., multiple degrees of freedom) was provided for continuous MAV functions (e.g. maneuvering in space) and a discrete input method (e.g., single action) was provided for discrete MAV functions (e.g., command to hover). Under these conditions, mission times were shorter, collisions were fewer, and more targets were photographed. Effects of video game experience and spatial ability were also investigated. Recommendations for the design of unmanned vehicle controls were discussed.

Lessons in How Not to Operate a Public School System Feb 25 2021 Nationally, South Carolina's public school system is on the lowest tier-grouping of states denoting students' academic performance. Over the years, SC State Legislators and the SC Department of Education have made various changes in academic benchmarks and standardize tests. So much so, that tests are now called assessments or assessment reports. How parents navigate their children's learning in South Carolina towards academic achievement, especially in an environment of constantly changing academic standards, is a riddle for many parents. However, this is not a problem for all parents. In well-to-do communities which have the resources to put forth, that community can offer students a quality public education, regardless of the State's changing academic standards. Most well-off communities usually have high levels of college educated people within their social order. When you have a community peopled with significant numbers of college graduates, that social order will have significant influence on growing children's intelligence towards attaining a college degree. In "Lessons in How Not to Operate a Public School System," we are not talking about the above. We are talking about communities which are low-income poverty-based, depending on government

for survival. Communities that are under-resourced, peopled with significant numbers of undereducated adults, having folks with "questionable" college degrees, culminating in a community of rudimentary low-level thinkers in positions of power.
