working, perhaps a gift or a family heirloom? This book is for you.

\* Do you like to tinker with mechanical things? This book is for  
you.

\* Have you taken a clock apart but can't get it back together? This  
book is for you.

\* Are you fascinated with clocks, have several you have bought but  
do not work? This book is for you.

Be bold. Take on your project. This book will hold your hand every  
step of the way and guide you to success. YOU CAN DO IT.

Why does a Grandfather Clock Stop Working? Often, the works are  
dirty, need oiling, or, most likely, both. When the clock stops, think

of it as “the oil light is on”. It’s a “cry for help”. Without oil, the metal parts grind on each other, causing serious wear and damage. Oil also attracts dust which can make the oil “gummy” and add drag to its operation until it can no longer overcome the friction. If a clock is oiled regularly [every three to five years], chances are you will only ever need to re-oil your clock. If the clock is allowed to run until it stops, the only sure way to service it is to remove the works from its case, dismantle the parts, clean, service, and put the movement back together with fresh oil and correct adjustment.

This book will teach you how to do all this.

**The Rand/UCLA Appropriateness Method User's Manual** Sep 27 2020 Health systems should function in such a way that the amount of inappropriate care is minimized, while at the same time stinting as little as possible on appropriate and necessary care. The ability to determine and identify which care is overused and which is underused is essential to this functioning. To this end, the "RAND/UCLA Appropriateness Method" was developed in the 1980s. It has been further developed and refined in North America and, increasingly, in Europe. The rationale behind the method is that randomized clinical trials--the "gold standard" for evidence-based medicine--are generally either not available or cannot provide evidence at a level of detail sufficient to apply to the wide range of patients seen in everyday clinical practice. Although robust scientific evidence about the benefits of many procedures is lacking, physicians must nonetheless make decisions every day about when to use them. Consequently, a method was developed that combined the best available scientific evidence with the collective judgment of experts to yield a statement regarding the appropriateness of performing a procedure at the level of patient-specific symptoms, medical history, and test results. This manual presents step-by-step guidelines for conceptualising, designing, and carrying out a study of the appropriateness of medical or surgical procedures (for either

diagnosis or treatment) using the RAND/UCLA Appropriateness Method. The manual distills the experience of many researchers in North America and Europe and presents current (as of the year 2000) thinking on the subject. Although the manual is self-contained and complete, the authors do not recommend that those unfamiliar with the RAND/UCLA Appropriateness Method independently conduct an appropriateness study; instead, they suggest "seeing one" before "doing one." To this end, contact information is provided to assist potential users of the method.
