Rocket Ships and God Dec 03 2020 We often hear that science and religion are incompatible, and that those of us who profess faith in God are unwilling to bend our will to the truth. In these pages, the prolific inventor and rocket scientist Dr. Rocco Martino exposes the fallacy and danger of such claims. He tackles head-on the question of truth, showing that despite all the technological and scientific discoveries of our age, religious truth has never been — and will never be — proven to be in error. Faith, Dr. Martino explains, is an indispensable element in any search for truth, even for scientists using the scientific method. In clear and easy-to-understand language, he carefully bridges the gap between faith and reason, showing that truth cannot possibly be discovered without the balanced application of both principles. In a very rational way he shows how we must use reason as a tool to accept or reject truth claims, and why faith coupled with revelation must serve as the final determinant for acceptance. When we approach scientific discoveries with the mind of faith,

we inevitably come to a much deeper understanding of who we are and how we came to be. Indeed, science heightens our ability to prove the existence of God and it, ultimately, strengthens our faith. Read these pages and you'll enter into the mind of a rocket scientist well-versed in philosophy and theology, journeying with him as he looks for God, and then at God.

Global Warming: The Answer Sep 12 2021 “Global Warming: The Answer” takes as given that global warming is man-made and occurring with increasingly adverse effects. After a brief review of the carbon cycle (and how man is disturbing it), the book argues that global warming is an economic problem: Given the right prices, technical solutions will follow. After looking at the (limited) solutions for “personal virtue” in reducing pollution, the book examines the chimera of “a carbon neutral life-style,” and necessity to achieve a fossil-free economy. Cap and Trade is shown to involve huge wealth transfers to established polluters, and is thus rejected in favor of a “revenue neutral, carbon tax.” More specifically an initial carbon tax of \$250 ton, with the revenue returned the public through lowered payroll taxes in the U.S. (or V.A.T. or sales taxes elsewhere). Existing and pending technologies that will take-off once fossil fuels are taxed are reviewed, as are ancillary policies in support of the carbon tax. Some suggestions are offered for increasing international collaboration. It is emphasized however that to date no significant action has been take to combat global warming: Kyoto, higher mileage requirements, and An Inconvenient Truth notwithstanding. Action is urgent! But first the public have to understand the answer to global warming.
