Silence within and beyond Pedagogical Settings Sep 17 2022 This book explores the significance of silence within and beyond pedagogical contexts. Silence is a complex and multidimensional phenomenon for everyday life: since schools mirror society, it is also significant in education. While silence can be experienced in a multitude of different ways, the author reflects on whether silence itself can bear a message: is there an aspect of dialogue in silence, or is it a language all of its own? This book examines a variety of silences essential for education, examining such topics as silence and aspects of power, silent students, and the relationship between listening and silence. Drawing on a range of empirical data, the author elucidates the significance of silence in pedagogical contexts.

Pandemic, Lockdown, and Digital Transformation Feb 10 2022 This edited volume discusses digital transformation in the context of the COVID-19 pandemic. In the wake of the COVID-19 pandemic and the widespread lockdown policies that followed, digital technologies were touted as an effective means towards ensuring continuity and minimal interruption of day-to-day operations for businesses and other institutions. Digital transformation, however, is an inherently complex process and the pressure of short adoption times may further increase complexities for organizations looking to foster digital technologies. This volume comprises original research contributions on theoretical foundations and empirical studies of digital transformations in the pandemic era. Written by academics and practitioners from diverse disciplines and industries, the chapters cover topics such as psychological and technical implications of pandemic situations, the economic, organizational, social, and legal implications of digital adoption, and case studies for digital transformation in different industries. This book will be useful for academics, technology professionals, business policy makers, NGO managers, and governments looking to optimize their digital transformation processes to better prepare their organizations in the presence of pandemic situations.

Humble Masterpieces Apr 19 2020 From M & Ms to Post-It Notes, a charming and insightful

collection of design marvels from everyday life, celebrated by the curator of the MoMA's department of architecture and design. Every day we use dozens of tiny objects, from Post-It notes to Band-Aids. If they work well, chances are we do not pay them much attention. But although modest in size and price, some of these objects are true masterpieces of the art of design. Paola Antonelli, curator of the Museum of Modern Art's Department of Design and Architecture, is a highly celebrated figure in the world of design (she was just ranked among the top 100 most powerful people in the world of art). Paola has long been passionate about the subject of everyday objects that are marvels of design. The response to her recent MoMA show, also called *Humble Masterpieces*, was electric. In addition to lively coverage in dozens of publications, the museum goes spread the word about the fun of learning about and nominating their own picks for humble masterpieces. Now, in this colorful visual feast, Antonelli chooses 100 fabulous objects, from Chupa Chup lollipops to Legos to Chopsticks and Scotch tape. Each object will be portrayed with a gorgeous close-up detail, a brisk and informative text on its origin and special design features, as well as a silhouette image of the object as we see it each day. Certain to appeal to a broad audience, and to lend itself to fun, creative promotional opportunities, *Humble Masterpieces* will celebrate the possibility of looking at our everyday lives in an all-new way.

Scientific Value of Arctic Sea Ice Imagery Derived Products Sep 05 2021 During the 1990s, a government program brought together environmental scientists and members of the intelligence community to consider how classified assets and data could be applied to further the understanding of environmental change. As part of the Medea program, collection of overhead classified imagery of sea ice at four sites around the Arctic basin was initiated in 1999, and two additional sites were added in 2005. Collection of images during the summer months at these six locations has continued until the present day. Several hundred unclassified images with a nominal resolution of 1 meter have been derived from the classified images collected at the 6 Arctic sites. To assist in the process of making the unclassified derived imagery more widely useful, the National Research Council reviewed the derived images and considered their potential uses for scientific research. In this book, we explore the importance of sea ice in the Arctic and illustrate the types of information--often unique in its detail--that the derived images could contribute to the scientific discussion.

The Symbian OS Architecture Sourcebook Dec 20 2022 The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The Architecture Sourcebook is different. It's not a how-to book, it's a 'what and why' book. And because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to interface to it and work with it. It will also show why design decision were made, and will bring those decisions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the "inside story" around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design has evolved through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference section itemising the OS and its toolkit at component level and providing a reference entry for each component.

Everything in its Proper Place Mar 11 2022 One hundred years ago, a lord lived happily in his castle. Alcohol flowed freely and the festivities were endless. One day, while he was out hunting, he jostled a young goose herder who was saved in the nick of time by a bonnet maker. The lord always said "Everything in the right place!" and that is what happened, to the lord's great chagrin. Over the years, things would change a lot. Hans Christian Andersen (1805-1875) was a Danish author, poet and artist. Celebrated for children's literature, his most cherished fairy tales include "The Emperor's New Clothes", "The Little Mermaid", "The Nightingale", "The Steadfast Tin Soldier", "The Snow Queen", "The Ugly Duckling" and "The Little Match Girl". His books have been translated into every living language, and today there is no child or adult that has not met Andersen's whimsical characters. His fairy tales have been adapted to stage and screen countless times, most notably by Disney with the animated films "The Little Mermaid" in 1989 and "Frozen", which is loosely based on "The Snow Queen", in 2013. Thanks to Andersen's contribution to children's literature, his birth date, April 2, is celebrated as International Children's Book Day.
