In the past, our ideas of psychiatric hospitals and their history have been shaped by objects like straitjackets, cribs, and binding belts. These powerful objects were often used as a synonym for psychiatry and the way psychiatric patients were treated, yet very little is known about the agency of these objects and their appropriation by staff and patients. By focusing on material cultures, this book offers a new perspective on the history of psychiatry: it enables a narrative in which practicing psychiatry is part of a complex entanglement in which power is constantly negotiated. Scholars from

different academic disciplines show how this material-based approach opens up new perspectives on the agency and imagination of men and women inside psychiatry. This collection presents papers from a symposium on extraction of rare metals as well as rare extraction processing techniques used in metal production. It covers metals essential for critical modern technologies including electronics, electric motors, generators, energy storage systems, and specialty alloys. Rare metals are the main building blocks of many emerging critical technologies and have been receiving significant attention in recent years. Much research in academia and industry is devoted to finding novel techniques to extract critical and rare metals from primary and secondary sources. The technologies that rely on critical metals are dominating the world, and finding a way to extract and supply them effectively is highly desirable and beneficial. Rapid development of these technologies entails fast advancement of the resource and processing industry for their building materials. Authors from academia and industry exchange knowledge on developing, operating, and advancing extractive and processing technologies. Contributions cover rare-earth elements (magnets, catalysts, phosphors, and others), energy storage materials (lithium, cobalt, vanadium, graphite), alloy elements (scandium, niobium, titanium), and materials for electronics (gallium, germanium, indium, gold, silver). The contributions also cover various processing techniques in mineral beneficiation, hydrometallurgy, separation and purification, pyrometallurgy, electrometallurgy, supercritical fluid extraction, and recycling (batteries, magnets, electrical and electronic equipment). This book presents novel design principles and technologies for dynamic isolation based on experimental studies. These approaches have now become the local standard in Beijing and are currently being promoted for use nationwide. Further, the book provides details of measures and guidelines for the design process. Departing from the traditional

understanding that isolation wards should be designed with high negative pressure, airtight doors and fresh air, it establishes the basis for designing biological clean rooms, including isolation wards, using a simple and convenient scientific approach. This book is intended for designers, engineers, researchers, hospital management staff and graduate students in heating ventilation air conditioning (HVAC), air cleaning technologies and related areas. Surgery encompasses all elements in the scientific care of surgical patients. The operation is the focal point for these patients. It is imperative that the patient comes to

the operating room (OR) optimally prepared physically and emotionally before performance of an operative procedure. The persons concerned with and/or contributing to surgical patient care are many. The practical nurse shares a special experience with the patient at this time of great stress and need in his life. Their relationship encompasses feelings, attitudes, and behavior approaches. The nurse's first objective is to promote and establish a meaningful, therapeutic relationship, enabling the provision of individualized care. He, then, is to provide the perioperative nursing care that is required for the safest possible care of the patient and production of a favorable surgical outcome. Any patient who is scheduled to have surgery poses special challenges to personnel entrusted with his care. Every procedure done by (OR) operating room personnel for the patient's operation--from the preoperative skin prep to final closure of the incision--requires thorough mastery of many precision techniques and uncompromising attention to detail in order to safeguard the patient. While in the OR, the patient is cared for by a highly trained team that must function as a unit if the patient's best interest is to be served. You, the OR specialist, are a member of this team. While each patient brings new challenges to the surgical team, there are certain problems and techniques associated with particular kinds of special surgery that can be anticipated. By preparing for these peculiarities of the various specialties, the team can circumvent a great many problems that would otherwise arise. In this subcourse, a large number of operations in various specialties are described, along with special dangers that may attend these particular procedures. The more familiar you become with these, the more effectively you will be able to do your part as a member of the operating room team. Also, in this course, you will study wound healing and wound care, contaminated wounds, and burns. Information you read in this course will aid you in maintaining and improving the health of soldiers. A husband digs a grave for his wife of 34-years and fills it in again after she threatens to kill him over a badly organised fridge. When the smiling homeless lady arrives on an affluent street one afternoon, widespread panic breaks out. Strimmers, hoses, hammers and drills hum a symphony of sedation from homes that never

looked so good. A true-crime fanatic follows the serial-killer lookalike from up the street. A haunting discovery leaves her wishing she had just stayed in and watched The Ted Bundy Tapes again. When the virus hit, no zombies roamed the streets. No police helicopters roared overhead and the military were never summoned to take down the monster. For the residents of one sleepy suburban neighbourhood, the real-life, domestic consequences of lockdown were far more disastrous than anything Hollywood ever told them would happen. Isolation Watch is a behind closed-doors, candid account of what happened to generation on-demand during the COVID-19 pandemic when they were ordered to stay indoors and forced to look at themselves in the mirror, naked. For most of his twenty-three years, Neil Kapoor has been desperate to move beyond the shadow of his mother's schizophrenia. Once he enters drama school, he finally has the chance to find his place in the world. Surrounded by a group of students who, like him, have complex emotional needs, Neil falls in love with Emily, a lovely young woman dealing with her own demons. But keeping two worlds hidden from each other proves to be too great a task for the emotionally fragile Neil. After his mother experiences yet another breakdown, he must confront the painful reality of how his father, his aunt, and the doctors have dealt with her illness over the years, each in their own flawed way. And as his beloved mother falls farther into darkness, he will have to make the most difficult choice of his life: uniting with his family, or breaking free from them forever." The archaeological site of Bagan and the kingdom which bore its name contains one of the greatest concentrations of ancient architecture and art in Asia. Much of what is visible today consists of ruins of Buddhist monasteries. While these monuments are a major tourist attraction, recent advances in archaeology and textual history have added considerable new understanding of this kingdom, which flourished between the 11th and 14th centuries. Bagan was not an isolated monastic site; its inhabitants participated actively in networks of Buddhist religious activity and commerce, abetted by the site's location near the junction where South Asia, China and Southeast Asia meet. This volume presents the result of recent research by scholars from around the world, including indigenous Myanmar people, whose work deserves to be known among the international community.
