Anthropology of the Name Dec 19 2019 The *Anthropology of the Name*—written almost twenty years ago but never translated into English, and updated here with a new preface by the author—works out a groundbreaking theory of the social function of political categorizations, exploring in the anthropological field what Alain Badiou and Jean-Claude Milner analysed, respectively, in the fields of philosophy, linguistics and psychoanalytic theory. Sylvain Lazarus calls the site of the book an 'enthusiastic site': enthusiastic about the fact that a new conception can be opposed to the end of the political and intellectual referents of the great period that extends from the Russian Revolution

to today—a period that the author divides into different sequences. The enthusiasm is also about the invention of the ‘sequentiality’ of politics and of ‘saturation’ (a method of investigating past politics as intellectualities of politics); and it is about the problematic of ‘historical modes of politics’, which identifies the politics that has taken place or that is taking place as rare and sequential, that is to say, as existing for a lapse of time that is datable. This is an enthusiastic book about the investigation of thought, about the statement that ‘people think’, and about the statement that ‘thought is relation of the real’.

Earth Before the Throne Jul 26 2020 My main purpose in writing this book is to show how different things may have been created or will take place in reality and prepare for it. Some of the things that we believe in may have already taken place. If things have taken place that pertains to our salvation, then we need to believe them. The main thing that we need to do is to be prepared and help others to meet Christ at his coming, or when we die. That should be the desire of all of us that follow Christ. I believe the First Resurrection started at the resurrection of Christ and will end at his coming. You must believe this because Christ paid the price in full by dying on the cross.

Missed Information May 04 2021 How better information and better access to it improves the quality of our decisions and makes for a more vibrant participatory society. Information is power. It drives commerce, protects nations, and forms the backbone of systems that range from health care to high finance. Yet despite the avalanche of data available in today's information age, neither institutions nor individuals get the information they truly need to make well-informed decisions. Faulty information and sub-optimal decision-making create an imbalance of power that is exaggerated as governments and corporations amass enormous databases on each of us. Who has more power: the government, in possession of uncounted terabytes of data (some of it obtained by cybersnooping), or the ordinary citizen, trying to get in touch with a government agency? In *Missed Information*, David Sarokin and Jay Schulkin explore information—not information technology, but information itself—as a central part of our lives and institutions. They show that providing better information and better access to it improves the quality of our decisions and makes for a more vibrant participatory society. Sarokin and Schulkin argue that freely flowing information helps systems run more efficiently and that incomplete information does just the opposite. It's easier to comparison shop for microwave ovens than for doctors or hospitals because of information gaps that hinder the entire health-care system. Better information about such social ills as child labor and pollution can help consumers support more sustainable products. The authors examine the opacity of corporate annual reports, the impenetrability of government secrets, and emerging techniques of “information foraging.” The information imbalance of power can be reconfigured, they argue, with greater and more meaningful transparency from government and corporations.

and electronic commerce domestically and internationally, and to consider new types of data collection and research that could be undertaken by public and private organizations. This book contains work presented at a conference held by executive branch agencies in May 1999 at the Department of Commerce. The goals of the conference were to assess current research on the digital economy, to engage the private sector in developing the research that informs investment and policy decisions, and to promote better understanding of the growth and socioeconomic implications of information technology and electronic commerce. Aspects of the digital economy addressed include macroeconomic assessment, organizational change, small business, access, market structure and competition, and employment and the workforce.

DEC Is Dead, Long Live DEC Apr 15 2022 From an insider, the forty-year saga of the rise and fall of Digital Equipment Corporation, one of the pioneering companies of the computer age. Digital Equipment Corporation created the minicomputer, networking, the concept of distributed computing, speech recognition, and other major innovations. It was the number-two computer maker behind IBM. Yet it ultimately failed as a business and was sold to Compaq Corporation. What happened? Edgar Schein consulted to DEC throughout its history and so had unparalleled access to all the major players, and an inside view of all the major events. He shows how the unique organizational culture established by DEC's founder, Ken Olsen, gave the company important competitive advantages in its early years, but later became a hindrance and ultimately led to its downfall. Coauthors Schein, Kampas, DeLisi, and Sonduck explain in detail how a particular culture can become so embedded that an organization is unable to adapt to changing circumstances even though it sees the need very clearly. The essential elements of DEC's culture are still visible in many other organizations today, and most former employees are so positive about their days at DEC that they attempt to reproduce its culture in their current work situations. In the era of post-dotcom meltdown, raging debate about companies "built to last" vs. "built to sell," and more entrepreneurial

startups than ever, the rise and fall of DEC is the ultimate case study.
