Changing Classes Mar 05 2021 This book makes a significant contribution towards understanding the new class structures of post-industrial societies and the changing processes of social stratification and mobility. Drawing together comparative research on the dynamics of social stratification in a number of key western societies, the authors develop a framework for the analysis of post-industrial class formation. They illustrate the significance of the relations between the welfare state and the household, and the critical interface between gender and class. Case studies of the USA, the UK, Canada, Germany, Norway and Sweden examine the differing application of these ideas in individual welfare states.

The Political Economy of American Industrialization, 1877-1900 Feb 04 2021 In the late nineteenth century, the United States underwent an extremely rapid industrial expansion that moved the nation into the front ranks of the world economy. At the same time, the nation maintained democratic institutions as the primary means of allocating political offices and power. The combination of robust democratic institutions and rapid industrialization is rare and this book explains how development and democracy coexisted in the United States during industrialization. Most literature focuses on either electoral politics or purely economic analyses of industrialization. This book synthesizes politics and economics by stressing the Republican party's role as a developmental agent in national politics, the primacy of the three great developmental policies (the gold standard, the protective tariff, and the national market) in state and local politics, and the impact of uneven regional development on the construction of national political coalitions in Congress and presidential elections.

The Middle Works, 1899-1924 Jan 03 2021 Volume 13 in The Middle Works of John Dewey, 1899-1924, series brings together Dewey's writings for 1921 and 1922, with the exception of Human Nature and Conduct. A Modern Language Association Committee on Scholarly Editions textual edition. Ralph Ross notes in his Introduction that the 53 items constituting this volume "defend Dewey's beliefs at 63 and look forward to what he was yet to write." The essays to which Dewey responded, as well as abstracts of articles that have been published only in Japanese, appear as appendixes. The article "Valuation and Experimental Knowledge" treats a favorite Dewey theme: "Most of the important crises of life are cases where tastes are the only things worth discussing, and where, if the life of reason is to exist and prevail, judgment must be performed with regard for its logical implications." The philosophical articles stress Dewey's view that, as Ross remarks, "philosophies are not timeless and universal, but speak to times, places and conditions."

Industrial Revolution: From Muscles to Machines! Dec 26 2022 The 22-book American Milestone series is featured as "Retailers Recommended Fabulous Products" in the August 2012 edition of Educational Dealer magazine. The words "industrial revolution" often make us think of greasy, sooty men working on enormous machines making incredible things. In reality, the industrial revolution started many years before the monster machines were even dreamed of - and it started with some of the smallest tools and parts ever made. In the late 17th century, clockmakers, builders of scientific equipment, and firearm manufactures required precision tools to help improve their products. From these small beginnings, the greatest advancements in human History were about to spring. In this book, kids will wonder at the first screws and steam engines. They will gaze in awe at the first locomotives riding on the first iron rails, and watch in amazement at the speed of 1700s textile machinery. But most of all, they will learn about how the power of inventors, creators, builders, and businessmen changed the world forever! This 32-page book is reproducible and educational. A partial list of the Table of Contents include: A Timeline of Events From Muscles to Machines! The Industrial Revolution In the Beginning Textile Revolution Full Steam Ahead! On the Water Machines that Make Things Steel and Skyscrapers Working Children Workers Unite! Patent Pending Additional Resources Glossary And More! This fun-fill activity book includes: Label Car Parts Build a Skyscraper Use Immigration Chart to Answer Questions Create the Front Page of a Newspaper Make a Protest Sign Connect the Dots Chronological Order Decipher the Code Answer the Questions Matching Word Search Maze And Much More!

Historical Sociology Dec 22 2019 This book argues that history and sociology share the same vital preoccupation: the desire to unravel the puzzle of human agency. How do large-scale social transformations occur, and what is the role of the individual in them? Phil Abrams devotes three chapters to the development of industrialism and scrutinizes, in that connection, the theories of Marx, Weber, and Durkheim. Subsequent chapters consider Talcott Parsons and the debate on "convergence"; the formation of "states"; the idea of the "event" as a legitimate concern of history and sociology; individuals and sociological generations; deviancy and revolution; and a final chapter on the limits of historical sociology.

Laura Miller, Slate: "This book hunts bigger game. Reads like an odd?and oddly satisfying?fusion of George Packer's The Unwinding and one of Michael Lewis' real-life financial thrillers." The New Yorker: "Does a remarkable job." Beth Macy, author of Factory Man: "This book should be required reading for people trying to understand Trumpism, inequality, and the sad state of a needlessly wrecked rural America. I wish I had written it." In 1947, Forbes magazine declared Lancaster, Ohio the epitome of the all-American town. Today it is damaged, discouraged, and fighting for its future. In Glass House, journalist Brian Alexander uses the story of one town to show how seeds sown 35 years ago have sprouted to give us Trumpism, inequality, and an eroding national cohesion. The Anchor Hocking Glass Company, once the world's largest maker of glass tableware, was the base on which Lancaster's society was built. As Glass House unfolds, bankruptcy looms. With access to the company and its leaders, and Lancaster's citizens, Alexander shows how financial engineering took hold in the 1980s, accelerated in the 21st Century, and wrecked the company. We follow CEO Sam Solomon, an African-American leading the nearly all-white town's biggest private employer, as he tries to rescue the company from the New York private equity firm that hired him. Meanwhile, Alexander goes behind the scenes, entwined with the lives of residents as they wrestle with heroin, politics, high-interest lenders, low wage jobs, technology, and the new demands of American life: people like Brian Gossett, the fourth generation to work at Anchor Hocking; Joe Piccolo, first-time director of the annual music festival who discovers the town relies on him, and it, for salvation; Jason Roach, who police believed may have been Lancaster's biggest drug dealer; and Eric Brown, a local football hero-turned-cop who comes to realize that he can never arrest Lancaster's real problems.

The Political Animal Jan 23 2020 People, as Aristotle said, are political animals. Mainstream political philosophy, however, has largely neglected humankind's animal nature as beings who are naturally equipped, and inclined, to reason and work together, create social bonds and care for their young. Stephen Clark, grounded in biological analysis and traditional ethics, probes into areas ignored in mainstream political theory and argues for the significance of social bonds which bypass or transcend state authority. Understanding the ties that bind us reveals how enormously capable we are in achieving civil order as a species. Stephen Clark advocates that a properly informed political philosophy must take into account the role of women, children, animals, minorities and the domestic virtues at large. Living and conducting our political lives like the animals we are is a more congenial prospect than is usually supposed.

The British Industrial Revolution in Global Perspective Jul 29 2020 Why did the industrial revolution take place in eighteenth-century Britain and not elsewhere in Europe or Asia? In this convincing new account Robert Allen argues that the British industrial revolution was a successful response to the global economy of the seventeenth and eighteenth centuries. He shows that in Britain wages were high and capital and energy cheap in comparison to other countries in Europe and Asia. As a result, the breakthrough technologies of the industrial revolution - the steam engine, the cotton mill, and the substitution of coal for wood in metal production - were uniquely profitable to invent and use in Britain. The high wage economy of pre-industrial Britain also fostered industrial development since more people could afford schooling and apprenticeships. It was only when British

engineers made these new technologies more cost-effective during the nineteenth century that the industrial revolution would spread around the world.

Auto-Industrialism Nov 25 2022 DIY check-outs, drones, self-driving cars, and e-government all are signs of the coming auto-industrial age. Will this end in mass unemployment or will new kinds of work emerge? Will 3D print production, desktop workshops and mass customization make up for lost blue-collar jobs? What will happen to health and education in the auto-industrial age? Will machines replace teachers and doctors? What might the economic and social future dominated by self-employment and a large DIY industry look like? Peter Murphy's lively, provocative book addresses these questions head-on.

Industrialization and Underdeveloped Countries Feb 16 2022 The volume of relevant research and literature on this topic is growing but originates mainly from economists, sociologists, and political scientists; geographers have been slow to make contributions. One reason may be that geographers have been preoccupied with differentiation within the geography of production whereas this new field directs attention to the geography of consumption and a study of economies. This book aims to focus attention on the complex and inter-related problems--social, economic, political, and geographical--that come with development, placing particular emphasis on the problems which accompany attempts at industrialization. Focusing on the complex and interrelated social, economic, political, and geographic problems that attend under-development, this book presents one of the first contributions from a geographer on what has been called the most important economic problem of the modern world. Contending

that industrialization is no answer for under-developed countries that are striving to maintain expanding populations and to strengthen their economy, Alan B. Mountjoy traces the distribution, causes, and problems of under-development and the difficulties with and possibilities for industrialization as an aid in solving those problems. He defines development and under-development, considers problems of industrialization (including environmental and human problems), discusses the forms industrialization takes, and analyzes the progress of industrialization in specific under-developed areas. The unique geographer's perspective and the ability of the author to select aspects of the study that most clearly reflect the problems of under-developed economies make this work a useful text and reference book for students and scholars of development, economic geography, and international relations.

Industrialisation and Society Mar 25 2020 Industrialisation and Society provides an essential introduction to the effects of industrialisation on British society, from Queen Victoria's reign to the birth of the welfare state in the 1940s. This book deals with the remarkable social consequences of the industrial revolution, as Britain changed into an urban society based on industry. As the first nation to undergo an industrial revolution, Britain was also the first to deal with the unprecedented social problems of rapid urbanisation combined with an unparalleled growth in population. Industrialisation and Society looks at contemporary ways in which the government and ordinary people tried to cope with these new pressures, and studies their reactions to the unforeseen consequences of the steam revolution. In particular, this indispensable book considers: \* the Victorian inheritance \* Edwardian England and the Liberal reforms \* the two world wars \* the Welfare State.

The Industrial Revolution: A Very Short Introduction Jun 20 2022 The 'Industrial Revolution' was a pivotal point in British history that occurred between the mid-eighteenth and mid-nineteenth centuries and led to far reaching transformations of society. With the advent of revolutionary manufacturing technology productivity boomed. Machines were used to spin and weave cloth, steam engines were used to provide reliable power, and industry was fed by the construction of the first railways, a great network of arteries feeding the factories. Cities grew as people shifted from agriculture to industry and commerce. Hand in hand with the growth of cities came rising levels of pollution and disease. Many people lost their jobs to the new machinery, whilst working conditions in the factories were grim and pay was low. As the middle classes prospered, social unrest ran through the working classes, and the exploitation of workers led to the growth of trade unions and protest movements. In this Very Short Introduction, Robert C. Allen analyzes the key features of the Industrial Revolution in Britain, and the spread of industrialization to other countries. He considers the factors that combined to enable industrialization at this time, including Britain's position as a global commercial empire, and discusses the changes in technology and business organization, and their impact on different social classes and groups. Introducing the 'winners' and the 'losers' of the Industrial Revolution, he looks at how the changes were reflected in evolving government policies, and what contribution these made to the economic transformation. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. The Fourth Industrial Revolution Feb 28 2023 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.
