When Stan's mom gets the job offer of a lifetime at a cutting-edge tech company, Stan packs his bags and exchanges Chicago for Springfield, home to the secretive tech behemoth, DeCobray Industries . . . Saying goodbye to big-city life is only the first challenge Stan faces in moving to Springfield, a town that's eerily under the thumb of his mother's powerful employer. DeCobray has its hand in everything, including the Lyre XR augmented reality headsets that Stan and his fellow students at Springfield Academy are asked to beta test. At first Stan loves his headset—data on his classmates is at his fingertips, and the Lyre's custom filters make school sort of fun—but then he meets Scarlett, Ichi no Zoro-me, and Julien, and his new friends show him there's a lot more going on behind DeCobray's flashy tech. When several kids go missing at school, Stan and his friends set out to uncover the truth behind the devices. But the further they dig, the more sinister the conspiracy at the heart of their town appears . . . "Technological progress in a

number of areas to include aerodynamics, micro-electronics, sensors, micro-electromechanical systems (MEMS), and micro-manufacturing, is ushering in the possibility for affordable development and acquisition of a new class of military systems known as micro-air vehicles (MAV). MAVs are a subset of uninhabited air vehicles (UAV) that are up to two orders of magnitude smaller than the manned systems that permeate our contemporary life. Recent advances in miniaturization may make possible vehicles that can carry out important military missions that heretofore were beyond our reach or could only be attained at great risk or resource expenditure. These missions will be possible if MAVs can fulfill their potential to attain certain attributes to include: low cost, low weight, little to no logistical "footprint," mission versatility, range, endurance, stealth, and precision ... This paper provides an outline of the contemporary technological dimension of MAVs and contemplates how they might be used to enhance Air Force operations." -- Abstract. Compiled by the author of *Janes Air Forces of the World*, this book is a must for aviation experts. In one volume the reader will find the composition and details of all air elements of a staggering 169 nations air forces and, where they exist, army air, naval air and such paramilitary organizations as the US Coast Guard Service. By definition such a book must be regularly updated and David Wragg has researched his subject right up to the minute. This latest book supersedes the author's early book in the Jane series. Alex Hills traveled Alaska by bush plane and snow machine, braving extreme weather and rough terrain to bring telephone service to small villages across the big state. Then he developed a new public radio station to serve the people of Alaska's huge northwest region. In *Finding Alaska's Villages* Alex tells the story of how he helped the state's telecom pioneers bring about an innovation that would forever change rural Alaska. It took some innovative technical work — and some convincing of government

officials and corporate executives — to make it happen. The innovation was the introduction of the small satellite earth stations that would eventually make needed telecommunication services — two-way medical communication, a phone in every house and business, and radio and live television programs — available in Alaska's villages. This book presents, in a comprehensive way, current unmanned aviation regulation, airworthiness certification, special aircraft categories, pilot certification, federal aviation requirements, operation rules, airspace classes and regulation development models. It discusses unmanned aircraft systems levels of safety derived mathematically based on the corresponding levels for manned aviation. It provides an overview of the history and current status of UAS airworthiness and operational regulation worldwide. Existing regulations have been developed considering the need for a complete regulatory framework for UAS. It focuses on UAS safety assessment and functional requirements, achieved in terms of defining an "Equivalent Level of Safety", or ELOS, with that of manned aviation, specifying what the ELOS requirement entails for UAS regulations. To accomplish this, the safety performance of manned aviation is first evaluated, followed by a novel model to derive reliability requirements for achieving target levels of safety (TLS) for ground impact and mid-air collision accidents. It discusses elements of a viable roadmap leading to UAS integration in to the NAS. For this second edition of the book almost all chapters include major updates and corrections. There is also a new appendix chapter. Antigone Samellas examines the modes of reception of Jesus' message of salvation. She explores the Greek and Jewish influence on Christian eschatology and traces the Hellenistic roots of Christian consolation philosophy. The author examines Christianity as a 'total therapy of grief' and highlights the differences that existed between the religious cures and the Hellenistic philosophical therapies. To gain a better understanding of the process of

conversion to the new faith Antigone Samellas also investigates which aspects of Christianity were appealing and which repugnant in the eyes of pagans and Jews. Finally, she attempts to convey something of the wisdom of the East, in all its cultural and religious nuances, to the modern reader. Chronicles the history of Christianity in China throughout the centuries, from the arrival of Christian missionaries during the seventh century to efforts to connect Chinese followers with European Catholics in 2000. "Shadow Cities dispels the myth that shantytowns are purely a third world phenomenon, showing that the great cities of Europe and North America were once dominated by shantytowns. And Neuwirth shows that squatters will build vital neighborhoods without private titles as long as they know they are not subject to eviction." "Shadow Cities acknowledges that the world of the squatters may be gritty, but it shows that it is governed by hope. Squatters, Neuwirth argues are building the cities of tomorrow."--BOOK JACKET. The unfolding of this transformation, its causes, and wider ramifications are examined in this masterful analysis of the changing patterns of interaction between the two most important cultural spheres in Asia. Tansen Sen offers a new perspective on Sino-Indian relations during the Tang dynasty (618-907), arguing that the period is notable not only for religious and diplomatic exchanges but also for the process

through which China emerged as a center of Buddhist learning, practice, and pilgrimage. He proposes that changes in religious interactions were paralleled by changes in commercial exchanges. For most of the first millennium, trading activities between India and China were closely connected with and sustained through the transmission of Buddhist doctrines. In the eleventh and twelfth centuries, however, secular bulk and luxury goods replaced Buddhist ritual items. Moreover, policies to encourage foreign trade instituted by the Chinese government and the Indian kingdoms transformed the China-India trading circuit in Historically, higher education was designed for a narrow pool of privileged students. Despite national, state and institutional policies developed over time to improve access, higher education has only lately begun to address how its unexamined assumptions, practices and climate create barriers for poor and working class populations and lead to significant disparities in degree completion across social classes. The data shows that higher education substantially fails to provide poor and working class students with the necessary support to achieve the social mobility and success comparable to the attainments of their middle and upper class peers. This book presents a comprehensive range of strategies that provide the fundamental supports that poor and working-class students need to succeed while at the same time dismantling the inequitable barriers that make college difficult to navigate. Drawing on the concept of the student-ready college, and on emerging research and practices that colleges and universities can use to explore campus-specific social class issues and identify barriers, this book provides examples of support programs and services across the field of higher education – at both two- and four-year, public and private institutions – that cover: Access supports. Examples and recommendations for how institutions can assist students as they make decisions about applications and admission. Basic needs supports. Covering

housing and food security, necessary clothing, sense of belonging through co-curricular engagement, and mental health resources. Academic and learning supports. Describes courses and academic programs to promote full engagement among poor and working class students. Advising supports. Illustrates advising that acknowledges poor and working class students' identities, and recommends continued training for both staff and faculty advisors. Supports for specific populations at the intersection of social class with other identities, such as Students of Color, foster youth, LGBTQ, and doctoral students. Gaining support through external partnerships with social services, business entities, and fundraising. This book is addressed to administrators, educators and student affairs personnel, urging them to make the institutional commitment to enhance the college experience for poor and working class students who not only represent a substantial proportion of college students today, but constitute a significant future demographic.

This is an indispensable resource about the role of Jewish women from post-biblical times to the twentieth century. Unique in its approach, it is structured so that each chapter, which is divided into three parts, covers a specific period and geographical area. The first section of the book contains an overview, explaining how historical events affected Jews in general and Jewish women in particular. This is followed by a section of biographical entries of women of the period whose lives are set in their economic, familial, and cultural backgrounds. The third and last part of each chapter, "The World of Jewish Women," is organized by topic and covers women's activities and interests and how Jewish laws concerning women developed and changed. This comprehensive work is an easy-to-use sourcebook, synopsizing rich and diverse resources. By examining history and analyzing the dynamics of Jewish law and custom, it illuminates the circumstances of Jewish women's lives and traces the changes that have occurred throughout the centuries. It casts a new and clear light on Jewish women as individuals and sets women firmly within the context of their own cultural and historical periods. The book contains illustrations, boxed text, extensive endnotes, and indices that list each woman by name. It is ideal for women's groups

and study groups as well as students and scholars. A clear, up-to-date reassessment of the Byzantine empire during a crucial phase in the history of the Near East. The narrative covers the last decade of the Roman empire as a superpower of the ancient world, the catastrophic crisis of the 7th century and the means whereby its embattled Byzantine successor hung on in Asia Minor until the Abbasid Caliphate's decline opened up new perspectives for Christian power in the Near East. After the Civil War, the U.S. Army demobilized at a high rate and soon found its numbers literally gutted. A captain testified before Congress in 1876 that his unit was so few in number that he frequently performed drill with only four men. He said he once saw a parade carried out in which one company was represented by a lone sergeant forming its front line and its captain occupying the rear line. They were their unit's only participants. 1 Many Americans know that the U.S. military has undergone a large downsizing effort in the 1990s. Fortunately, it has not been to the extent of that experienced by the Army after the War between the States. Although many equate the initiation of personnel and force structure reductions with the end of the Cold War in 1989 or the breakup of the Soviet Union in 1991, the Department of Defense (DOD), as a whole, started downsizing earlier, in 1988. Troop reductions came about due to the growing pressure to hold defense spending in check. This led two services, the Army and the Air Force, to begin downsizing moderately and internally in 1987. One of the first groups targeted was commissioned service members, in response to congressional attention directed at what the legislative body perceived as a bloated officer corps. The Marine Corps began to grow smaller in 1988. The Navy did not start declining in number until 1990. Its delay in carrying out personnel cuts was due to the fact that it had been pursuing a major program to build up to a fleet of 600 ships. In the late 1980s, the service still did not have the sailors it needed to crew a fleet of that size. The rise of

Gorbachev in the USSR signaled a change in the U.S. security environment. The fall of the Berlin Wall in 1989 was evidence of that transformation. The disintegration of the Soviet Union two years later was proof. This event, probably one of the most important in this century, boded well for the United States. Downsizing of the U.S. war machine, halted tempo. -- Introduction.
