Aston Martin V8 Feb 03 2021 Development of Aston Martin's V8 engine began in 1963 as a replacement for the six cylinder engines which had powered every model of Aston Martin since the 1950 DB2. In 1966 design work began on a new GT model and both car and engine were to be unleashed on the public in October 1967. With barely twelve months to complete the car, Aston Martin pulled it off, and the DBS

was born. Unfortunately, the new V8 engine wouldn't be ready for another two years and the DBS had to make do with the old-fashioned Lagonda engine. Being heavier than the car it replaced, it was slower but in many ways more refined. When the V8 engine was finally ready for the DBS chassis, the resulting car was one of the fastest, safest and greatest cars of its generation. It would set the benchmark, not just for the next thirty years of Aston Martins, but also its competitors in the GT class. The last of the 5,016 V8-powered cars, a Volante Special Edition, left the factory on 20 October 2000, ending an era for Aston Martin.

Excerpt: American Motors Corporation (AMC) produced a series of widely-used V8 engines from the mid-1950s before being absorbed into Chrysler in 1987. Chrysler kept the AMC V8 in production until 1991 for the Jeep Grand Wagoneer. This engine family is now referred to as the "GEN-1" AMC V8, but in its time it was known as the Rambler V8. As part of a larger plan of merging Packard, Nash, Hudson, and Studebaker, AMC President George W. Mason had a verbal agreement with Packard that the two companies would supply parts for each other when practical. AMC started buying Packard V8s in 1954 for the big 1955 Nash Ambassador and Hudson Hornet. These were

supplied with Packard "Ultramatic" automatic transmissions - exclusively. Packard sent AMC some parts bids, but were rejected as too expensive. George W. Romney, AMC's new head decided against further relationships with Packard. Romney ordered his engineering department to develop an in-house V8 as soon as possible. The engineering department hired David Potter, a former Kaiser Motors engineer, to come in and help develop the engine. Potter had previously worked on a V8 design for Kaiser, and had the experience necessary to take the engine from drawing board to full production in just under 18 months, an extraordinary engineering feat at the time-slide rules were the norm because there were no computers. All these engines share common external dimensions, weight - about 601 lb (273 kg) - forged crankshaft and rods, as well as most other parts. The stroke for all GEN-1 V8 is 3.25 inches. Aston Martin Engine Development: 1984-2000 _____ Nov 12 2021 The pace at which technology progresses within the motor industry can be incredibly fast. What may have seemed an almost insurmountable problem in the late 80s and early 90s and therefore a major achievement when resolved, would now seem a minor inconvenience due to the advances made in component technology. Aston Martin Engine Development thoroughly details the design and development of Aston Martin engines including the 580X Vantage, the Virage, and the V8 Coupe. In particular it focusses on the twin supercharged 32 valve Vantage engine - an engine which set new standards, being the most powerful production car engine in the world at the time of its release in 1992. Illustrated with photographs from that time and including power and torque curves, this book provides a unique look into a period of Aston's history, written by one of the key men

involved in making it happen. It gives an insight into life at the AM factory at Newport Pagnell; an understanding of the benefits of Supercharging at the time of manufacture; and a historic record of engine design, development and production that would otherwise have been lost to time. Aston Martin Engine Development will appeal to Aston Martin owners and enthusiasts and to anyone else with an interest in engines and high-performance cars.
